

Support Comprehensive Sex Education in Our Schools!

To our elected officials:

Some school districts have little or no sex education as part of their curriculum. Some schools may choose to use abstinence-only programming instead, which often communicates medically inaccurate and misleading information to teenagers. We support comprehensive sex education that includes information about abstinence as well as contraception and condoms. Comprehensive sex education that provides medically accurate information about both abstinence and contraception is proven to work. Our teenagers deserve all the information they need to avoid unintended pregnancy and sexually transmitted infections. Please support the Health Education Bill which adds health education to the core curriculum in Massachusetts public schools, including the topics of reproduction and sexuality.
